

You want the best
smile for your child,
and so do we.

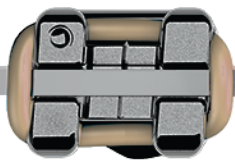

THE PITTS 21 DIFFERENCE

Braces have changed a lot in the last 15 years. If you wore braces, you likely wore older technology that used elastics to connect the wire to the bracket. The older elastic systems created uncomfortable friction after each appointment and had other challenges including: difficulty cleaning, tooth removal, and longer treatment times.

Pitts 21 uses the latest in braces technology by securing the bracket to the wire using a frictionless sliding door. The good news for you and your child is this leads to faster treatment times, exceptional comfort, and the most beautiful smiles.

Pitts21™

Smile with the Best

THE BEST SMILES

Pitts 21 was designed to create wide, beautiful 12 tooth smiles. You can see the Pitts 21 difference by comparing the two images here. In the narrow 6 tooth smile, you will notice dark corridors near the corners of the mouth due to tooth removal. The 12 tooth Pitts 21 smile features a wider, more beautiful smile since healthy teeth were not removed. Pitts 21 allows your orthodontist to create smiles that are as unique as the individual.

12 Tooth Smile

6 Tooth Smile

Reduced need for head gear or palate expanders. The Pitts 21 system is meticulously designed to give your orthodontist better control, so additional appliances are essentially a thing of the past.

FASTER TREATMENT TIME

Designed for shorter treatment times. With the precision of Pitts 21, your orthodontist will be able to deliver exceptional results sooner.

Fewer appointments to fit into your already busy schedule. The efficient Pitts 21 system means that your child's teeth will move quickly and predictably, so fewer appointments may be needed.

Smile with the Best

EXCEPTIONAL COMFORT

Pitts 21 braces are designed with smooth rounded corners to create a more comfortable experience. Pitts 21 also has a smaller profile, and a rubber band-less door, which supports better hygiene since plaque has less of an opportunity to accumulate.

Pitts 21 braces are specially designed to move teeth faster and with less force, so there is almost no discomfort. Gone are the days of painful wire tightening. With our virtually frictionless system, your child's tooth movement will go unnoticed and the results will be apparent sooner.

We believe that your orthodontist creates the best smiles. Pitts 21 braces gives your orthodontist the tools he or she deserves.
